EDUCATION

Sardar Patel Institute of Technology

Bachelor of Technology in Computer Engineering – CGPA : 7.0

B.K. Birla College of Science, Commerce and Arts

HSC - 12th Science

Nutan Dnyan Mandir

SSC - 10th Standard

Nov 2022 – June 2026

Andheri West, Mumbai

June 2020 – May 2022

Kalyan West, Mumbai

June 2011 – June 2020

Kalyan East, Mumbai

RELEVANT COURSEWORK

- Data Structures
- Algorithms & OOPS
- Operating Systems
- Computer Networks
- Database Management
- Web Development
- Data Analytics
- Natural Language Processing

PROJECTS

SAMARTH | React, Supabase, Flask, Streamlit, IPFS, scikit-learn

Ongoing

- Built a smart policing platform for Mumbai, featuring crime intensity prediction across 24 wards using ML models and an interactive heatmap.
- Developed a FIR case prioritization tool using **Random Forest** and **Gradient Boosting**, with a **Streamlit dashboard** for visual insights. Enabled tamper-proof evidence storage with **IPFS (via Pinata)** and unique CIDs to ensure file immutability and traceability.
- Implemented a media anomaly detection module using metadata, frequency, and edge consistency analysis to flag suspect uploads.
- Integrated a complaint portal using **React and Supabase** to enable secure citizen reporting with role-based access.

Yummie – Food Delivery Website | MERN Stack, Stripe

August 2024

- Built a responsive full-stack food delivery platform using the **MERN stack**, enabling users to browse menus, place orders, and track delivery status.
- Integrated **Stripe** for secure payment processing and user authentication.
- Designed a dynamic admin dashboard to manage orders, view order histories, and monitor live order statuses.
- Connected the backend to **MongoDB** for efficient storage and retrieval of order and user data.

Calculator App with Currency Converter | React Native

July 2024

- Built a multi-functional calculator app supporting basic arithmetic and unit conversions including length, weight, and temperature.
- Integrated a real-time ExchangeRate API to fetch and display live currency values for accurate global conversions.

Diabetic Retinopathy Detection | React, Supabase, Python, Flask, Keras, Numpy

March 2024

- Trained a deep learning model using **ResNet-50** to detect and classify diabetic retinopathy stages (0–4) from retinal images — a diabetes-related eye condition that can lead to vision loss if untreated.
- Developed a full-stack web application with a **React** frontend for image upload and result visualization.
- Implemented a **Flask** backend in Python to serve the trained model and perform real-time inference on uploaded images. Integrated **Supabase** for user authentication and secure storage of user prediction history.
- Displayed user-friendly diabetic severity levels along with precautionary guidance based on prediction output.

TECHNICAL SKILLS

Languages: C, C++, Java, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: React.js, React Native, Node.js, Express.js, Next.js, Tailwind CSS

Databases: MySQL, MongoDB

Tools & Platforms: Git, GitHub, Tableau, VS Code

ACHIEVEMENTS

- Solved **600+ problems** on LeetCode, showcasing strong problem-solving skills. [Leetcode](#)
- Maintained a daily streak of **300+ days**, demonstrating consistency and dedication.
- Earned **16 LeetCode badges**, including monthly milestones and daily streaks (50, 100, 200, 365 days).
- Achieved **Pupil** rank on Codeforces with a maximum rating of **1218**. [Codeforces](#)
- Proficient in **Data Structures and Algorithms**, with a solid grasp of core concepts.
