EDUCATION

Sardar Patel Institute of Technology

Bachelor of Technology in Computer Engineering – CGPA : 7.0

B.K. Birla College of Science, Commerce and Arts

HSC - 12th Science

Nutan Dnyan Mandir

SSC - 10th Standard

Nov 2022 – June 2026

Andheri West, Mumbai

June 2020 – May 2022

Kalyan West, Mumbai

June 2011 – June 2020

Kalyan East, Mumbai

PROJECTS

SAMARTH | React, scikit-learn, XGBoost, NLP 🐙

Ongoing

Secure Analysis and Multi-model Anomaly Recognition for Tracking Handled Cases

- An online complaint registration system that uses a multi-modal approach (text and image analysis) to filter out invalid or suspicious entries, and prioritizes genuine complaints for faster response.
- Built and trained an **XGBoost** model to detect anomalous complaints using text features; handled data preprocessing and testing using **scikit-learn**.
- Integrated the NLP model with the image analysis module to allow complaint verification through both sources.
- Contributed to frontend development by building key user interface components in **React**, ensuring smooth complaint submission flow and user-friendly interaction.

AlgoSync - DSA Question Manager | Role : Backend | MERN, Tailwind, Gemini API, Cursor 🐙 🔄 June 2025

- Built a full-stack platform where users can save DSA problems from different platforms, track progress, take notes, and generate code using the Gemini API.
- Developed backend with **Express.js** and **MongoDB**, handling schema design, JWT authentication, and user-specific data storage.
- Integrated **Gemini API** for question parsing and AI-based solution suggestions based on user queries.
- Used **Cursor** to streamline Gemini integration and improve frontend component flow for smooth UX with **TailwindCSS** and **shadcn/ui**.

Yummie – Food Delivery Website | Role : Backend | MERN, Stripe 🐙

August 2024

- Built a responsive full-stack food delivery platform using the **MERN stack**, enabling users to browse menus, place orders, and track delivery status.
- Integrated **Stripe** for secure payment processing and user authentication.
- Designed a dynamic admin dashboard to manage orders, view order histories, and monitor live order statuses.
- Connected the backend to **MongoDB** for efficient storage and retrieval of order and user data.

Diabetic Retinopathy Detection | React, Python, Flask, Keras, Numpy 🐙 🔄

March 2024

- Trained a deep learning model using **ResNet-50** to detect and classify diabetic retinopathy stages (0-4) from retinal images - a diabetes-related eye condition that can lead to vision loss if untreated.
- Developed a full-stack web application with a **React** frontend for image upload and result visualization.
- Implemented a **Flask** backend in Python to serve the trained model and perform real-time inference on uploaded images. Integrated **Supabase** for user authentication and secure storage of user prediction history.
- Displayed user-friendly diabetic severity levels along with precautionary guidance based on prediction output.

RELEVANT COURSEWORK

- | | | | |
|-----------------------|---------------------|---------------------|-------------------------------|
| • Data Structures | • Algorithms & OOPS | • Operating Systems | • Natural Language Processing |
| • Database Management | • Web Development | • Data Analytics | |

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: React.js, Redux, Node.js, Express.js, Tailwind CSS

Databases: MySQL, MongoDB

Tools & Platforms: Git, GitHub, Postman, VS Code, Vercel, Railway

ACHIEVEMENTS

- Achieved **Pupil** rank on Codeforces with a maximum rating of **1218**.
- Solved **600+ problems** on LeetCode, showcasing strong problem-solving skills.
- Maintained a daily streak of **300+ days** with consistency and dedication.
- Earned **17 LeetCode badges**, including monthly milestones and daily streaks (50, 100, 200, 365 days).
